

# Driving a Zilch EV

## Hyundai Ioniq series I, and II

### Step 1: Checking & unlocking the car

First, check the car for any damage. Then tap your access card over the card reader on the front windscreen to unlock (just a quick tap is all that's needed!). Second, unplug charger.

### Step 2: Turn on the car

Depress brake pedal (with foot) and press the 'POWER' button once.

### Step 3: Getting ready to go

The handbrake will automatically disengage when you put the car into D, R or N. Select your gear (located in the centre console). Take foot off brake pedal and drive as usual.

### Step 4: Stopping & parking the car

Once stopped, press P button on gear changer to put car into park. With foot on brake pedal, pull up on the ( P ) lever located at the back of the centre console to engage handbrake. Press the 'POWER' button once to turn the car off. Tap card on windscreen reader to lock (unless you're ending your booking and need to plug in to charge).

### Step 5: Charging the car

- Returning to the same hub/car park you collected the car from, park in any available Zilch parking bay.
- Turn car off and open the charger flap (push button marked to right of steering wheel).
- Plug charger into car and tap access card on reader on front of charging unit to activate.
- Lock car by tapping access card on reader on front windscreen – and don't forget to end your booking!
